

Magento extension

Merchant Integration Manual

2016-03-01

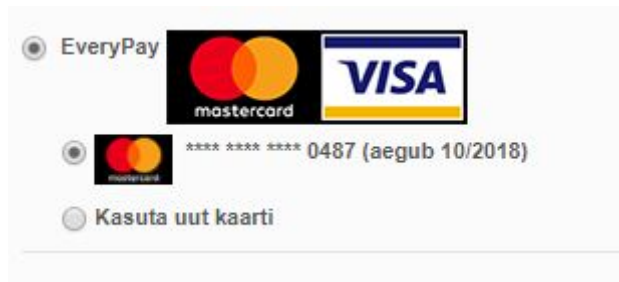

Features

- Adds EveryPay card payment gateway service to the Magento installation for supporting Visa and MasterCard payments.
- Enables embedding the payment form to the checkout workflow in iFrame.
- One-click-payments allow returning customers to perform payments faster and easier using saved card details.

iFrame payment form:

A screenshot of a payment form embedded in an iFrame. The form is set against an orange background. At the top, there is a navigation bar with links: "Kontohaldus", "Soovikord", "Ostukord", "Vormista ost", and "Välju". Below this is a search bar with the text "Otsi" and "Otsi kogu poest.." and a "MINE" button. The main form area contains a white input field with the card number "5168 8321 3636 0487" and the MasterCard logo. Below that is a white input field with the name "John Doe". Further down are two white input fields: one with "10 / 18" and another with "119" and an information icon. A large orange button with the text "Maksa €45.00" is positioned below these fields. At the bottom of the form, there are logos for "Verified by VISA" and "MasterCard. SecureCode."

One-click-payments:

Requirements

The extension has been tested to work with the following software versions:

- Magento CE 1.7.0.2 or above.
- PHP 5.4 or above.

However, it's possible that the extension works even when these are not met.

Installation

EveryPay extension is available in Magento Connect repository, free of charge:

<https://www.magentocommerce.com/magento-connect/everypay-card-payments.html>

The extension can be installed via Magento Connect Manager (available in Admin Panel via *System -> Magento Connect*).

Whenever possible, the extension should first be installed on development and/or staging environments before deploying it to the production server.

While some steps below are optional, it's strongly recommended not to skip any of them:

- 1) Backup Magento database.
- 2) Backup the code base. Even though EveryPay extension doesn't overwrite any core files, it's good to have clean code base you can go back to. Ideally the code should be versioned (Git, SVN, etc.).
- 3) Get Extension Key from Magento Connect.
- 4) Use Extension Key to install software using Magento Connect Manager.
- 5) Flush Cache.
- 6) Log out.
- 7) Log in and continue to configuration.

Configuration

Once the extension is installed, it can be configured via *System -> Configuration -> Sales -> Payment Methods*.

EveryPay is a card payment gateway service provider, enabling e-commerce merchants to collect credit and debit card online payments from their customers.

EveryPay, Hõbedä 6, 10125 Tallinn, Estonia

<https://every-pay.com/contact>

Enabled	Yes	[WEBSITE]
Title	EveryPay	[STORE VIEW]
New Order Status	On Hold	[WEBSITE]
Connection type	iFrame	[GLOBAL]
iFrame skin name	everypay_magento	[STORE VIEW]
Gateway URL	LIVE	[GLOBAL]

	▲ Show logo in checkout	
Sort order		[STORE VIEW]

EveryPay has two separate Merchant Portals:

Live/production: <https://portal.every-pay.eu/>

Test/demo: <https://mwt-demo.every-pay.com/>

Please ensure that you access the correct environments.

Field name	Description
Enabled	Enable or disable EveryPay Payment Method.
Title	Title for Checkout option label.

New Order Status	Initial order status right after it's been created and before the card payment is processed.
Connection type	iFrame - payment form is embedded in the checkout workflow. Redirect - after checkout the buyer is redirect to EveryPay payment page
iFrame skin name	Specifies the skin name, configured under Merchant Portal settings. Default value is 'default' which has standard EveryPay payment form design.
Gateway URL	LIVE - live/production mode (payments are sent to EveryPay production server) TEST - test mode (payments are sent to EveryPay test/demo server)
API username LIVE/TEST	Everypay Live and Test servers have different API credentials. API settings are defined in EveryPay Merchant Portal LIVE: https://portal.every-pay.eu/merchant_settings/general TEST: https://mwt-demo.every-pay.com/merchant_settings/general Looks like this (16 symbols): 68d9463b47d9a364
API secret LIVE/TEST	Everypay Live and Test servers have different API credentials. API settings are defined in EveryPay Merchant Portal LIVE: https://portal.every-pay.eu/merchant_settings/general TEST: https://mwt-demo.every-pay.com/merchant_settings/general Looks like this (32 symbols): 53bac7aa8131d21671b6f2fb15de2ce4
Processing Account	Processing accounts are defined in EveryPay Merchant Portal. LIVE: https://portal.every-pay.eu/merchant_settings/processing_accounts TEST: https://mwt-demo.every-pay.com/merchant_settings/processing_accounts Looks like this: EUR3D1 or USD3D1
Enable Payments With Saved Cards	Enables one-click-payments which allows returning customers to save their card details (a reference token to required card information in EveryPay system) for faster and easier payments in the future.
Send Order Confirmation	Send transactional e-mail (Order Confirmation) right after the order is created.
Send Invoice	Send transactional e-mail (Invoice) once the payment is considered successful.
Quick Redirect	Allows skipping pre-payment instruction page and go straight to the payment page.

Hide Logo	Show or hide the payment method logo.
Sort order	When system has several active payment methods installed, this field determines their display order.

Test cards

Please note that only test cards must be used for testing. The following test cards can be used to perform successful test payments:

Card type	Card number	Expiration date	CVC code	Cardholder name
Mastercard	5168830763287080	10/21	949	(any name)
Visa	4761739001010010	09/25	179	(any name)
Mastercard	2223000010021381	12/19	656	(any name)

The 3DS authentication simulator (Poseidon bank) password is **secret**. To test failed payments, the easiest ways are to enter incorrect expiration date or incorrect 3DS password.

Changelog

Date	Change
2018-10-25	Changed Mastercard test card out for a new one, added Mastercard test card with 22 beginning
2018-03-22	Added test cards info
2017-10-23	Updated to correspond to extension v1.9.3.6. Changed iFrame pictures.
2016-03-01	Updated to correspond to extension v1.3.6 (added support for one-click-payments)
2015-11-09	Updated to correspond to extension v1.2.5 (added support for iFrame payment form)
2015-07-10	Initial document
